

Table 3. DCFS Deciduous Stocking Standards

| Preferred Species (SPP) |               |     |               |     | Acceptable Species (SPP) |     |               |     |               |     |               |     | Stocking (w/s) |               |               | MITD (m) | Milestone Dates |            | Tree Height > Brush (min %) |             |
|-------------------------|---------------|-----|---------------|-----|--------------------------|-----|---------------|-----|---------------|-----|---------------|-----|----------------|---------------|---------------|----------|-----------------|------------|-----------------------------|-------------|
| SPP                     | MIN FG HT (m) | SPP | MIN FG HT (m) | SPP | MIN FG HT (m)            | SPP | MIN FG HT (m) | SPP | MIN FG HT (m) | SPP | MIN FG HT (m) | SPP | MIN FG HT (m)  | TSS p+a (sph) | MSS p+a (sph) |          | MSS p (sph)     | RD (years) |                             | LFG (years) |
| AT                      | 2             | EP  | 2             | ACT | 2                        | SX  | 1             | PLI | 2             | BL  | 1             | FDI | 1              | 1200          | 1200          | 1000     | 2               | 4          | 20                          | 150         |
| AT                      | 2             | EP  | 2             | ACT | 2                        | SX  | 0.8           | PLI | 1.6           | BL  | 0.8           | FDI | 0.8            | 1200          | 1000          | 800      | 2               | 4          | 20                          | 150         |

Additional Standards

Standards applicable to deciduous leading stands with  $\geq 80\%$  basal area representation on submesic or mesic sites

Standards applicable to deciduous leading stands with  $\geq 60\%$  basal area representation on sites that are not submesic or mesic
